

## $^{82}\text{Ni}$

The discovery of  $^{82}\text{Ni}$  was described by Sumikama et al. in the 2017 paper “Observation of new neutron-rich Mn, Fe, Co, Ni, and Cu isotopes in the vicinity of  $^{78}\text{Ni}$ ” ([2017Su15](#)). A 3-mm-thick beryllium target was irradiated with a 345 MeV/nucleon  $^{238}\text{U}$  from the RIKEN Radioactive Isotope Beam Factory (RIBF). Fission fragments were identified after the BigRIPS separator and the ZeroDegree spectrometer: “The particle-identification plot for the in-flight fission fragments highlights the first observation of eight new isotopes:  $^{73}\text{Mn}$ ,  $^{76}\text{Fe}$ ,  $^{77,78}\text{Co}$ ,  $^{80,81,82}\text{Ni}$ , and  $^{83}\text{Cu}$ .”
