

⁷⁵Zn

⁷⁵Zn was observed by Grapengiesser et al. in the 1974 paper “Survey of Short-lived Fission Products Obtained Using the Isotope-Separator-On-Line Facility at Studsvik” in 1974 ([1974Gr29](#)). The zinc isotopes were produced by neutron induced fission and identified at the OSIRIS isotope-separator online facility at the Studsvik Neutron Research Laboratory in Nyköping, Sweden. In the first long table, the half-life of ⁷⁵Zn is quoted as 10.2(3) s.
