

## $^{88}\text{Ga}$

In 2024, Shimizu et al. reported the observation of  $^{88}\text{Ga}$  in the paper “Production of new neutron-rich isotopes near the N=60 isotones  $^{92}\text{Ge}$  and  $^{93}\text{As}$  by in-flight fission of a 345 MeV/nucleon  $^{238}\text{U}$  beam” ([2024Sh17](#)). The beam was provided by the RIBF accelerator complex at RIKEN and the fission fragments were separated and identified with the large-acceptance two-stage separator BigRIPS. “In total, we have produced and identified the following 15 new neutron-rich isotopes:  $^{84}\text{Cu}$ ,  $^{86,87}\text{Zn}$ ,  $^{88,89}\text{Ga}$ ,  $^{91,92}\text{Ge}$ ,  $^{93,94,95}\text{As}$ ,  $^{96,97}\text{Se}$ ,  $^{99,100}\text{Br}$ , and  $^{103}\text{Kr}$ .” Seventy-five events for  $^{88}\text{Ga}$  were recorded.
