^{106}Sr

The discovery of ^{106}Sr was reported in the 2010 article "Identification of 45 new neutron-rich isotopes produced by in-flight fission of a ^{238}U Beam at 345 MeV/nucleon," by Ohnishi et al. (2010Oh02). The experiment was performed at the RI Beam Factory at RIKEN, where the new isotopes were created by in-flight fission of a 345 MeV/nucleon ^{238}U beam on a beryllium target. ^{106}Sr was separated and identified with the BigRIPS superconducting in-flight separator. The results for the new isotopes discovered in this study were summarized in a table. Twenty-two counts for ^{106}Sr were recorded.
