

## <sup>109</sup>Rh

In the 1972 paper “Further measurements of gamma transitions in spontaneous-fission fragments of <sup>252</sup>Cf,” Hopkins et al. from the Center for Nuclear Studies of the University of Texas in Austin, reported the observation of <sup>109</sup>Rh ([1972Ho08](#)). Fission fragments from the spontaneous fission of <sup>252</sup>Cf were measured in coincidence with X-rays and low-energy  $\gamma$ -rays. In a table the energy (358.8 keV) of an excited state was identified correctly.
