

^{102}Pd

Dempster reported the observation of stable ^{102}Pd in the 1935 paper “Isotopic constitution of palladium and gold” ([1935De02](#)). Palladium ions were produced with a high-frequency spark and analyzed with the Chicago mass spectrograph. “With the mass-spectrograph it was found that palladium consists of six isotopes with atomic masses 102, 104, 105, 106, 108, 110.”
