

## $^{133}\text{Cd}$

The discovery of  $^{133}\text{Cd}$  was reported in the 2010 article “Identification of 45 new neutron-rich isotopes produced by in-flight fission of a  $^{238}\text{U}$  beam at 345 MeV/nucleon,” by Ohnishi et al. (2010Oh02). The experiment was performed at the RI Beam Factory at RIKEN, where the new isotopes were created by in-flight fission of a 345 MeV/nucleon  $^{238}\text{U}$  beam on a beryllium target. The isotopes were separated and identified with the BigRIPS superconducting in-flight separator. The results for the new isotope discovered in this study were summarized in a table. 13 individual counts for  $^{133}\text{Cd}$  were recorded.
