

¹²⁶In

Grapengiesser et al. reported the observation of ¹²⁶In in “Survey of Short-lived Fission Products Obtained Using the Isotope-Separator-On-Line Facility at Studsvik” in 1974 (1974Gr29). ¹²⁶In was produced by neutron induced fission and identified at the OSIRIS isotope-separator online facility at the Studsvik Neutron Research Laboratory in Nyköping, Sweden. In the long table of experimental half-lives of many different isotopes the half-life of ¹²⁶In is quoted as 1.53(1) s.
