

## **<sup>11</sup>B**

Aston discovered <sup>11</sup>B in 1920 as reported in “The constitution of the elements” (1920As02). Isotopes were identified at the Cavendish Laboratory in Cambridge, UK, by measuring their mass spectra. “Boron (atomic weight 10.9) is a complex element. Its isotopes are 10 and 11, satisfactorily confirmed by second-order lines at 5 and 5.5.”
