

¹³¹Pr

The first identification of ¹³¹Pr was reported in 1977 by Bogdanov et al. in “New neutron-deficient isotopes of barium and rare-earth elements” ([1977Bo02](#)). The Dubna U-300 Heavy Ion Cyclotron accelerated a ³²S beam which bombarded enriched targets of ¹⁰²Pd and ¹⁰⁶Cd. The isotopes were identified with the BEMS-2 isotope separator. “In the present paper, isotopes were mainly identified by measuring the γ -ray and X-ray spectra of the daughter nuclei formed as a result of measuring the β^+ decay.”
