

## **<sup>148</sup>Sm**

In the 1933 paper “Constitution of neodymium, samarium, europium, gadolinium and terbium” Aston reported the first observation of <sup>148</sup>Sm ([1933As02](#)). Rare earth elements were measured with the Cavendish mass spectrograph. “Samarium (62) gives a strong pair 152, 154 and a triplet 147, 148, 149.”
