

¹⁷⁰Yb

Dempster reported the discovery of ¹⁷⁰Yb in the 1938 paper “The isotopic constitution of gadolinium, dysprosium, erbium and ytterbium” ([1938De01](#)). An ytterbium oxide sample reduced with neodymium was used for analysis in the Chicago mass spectrograph. “The ytterbium oxide was reduced by neodymium and also showed two new isotopes at masses 170 and 168.”
