

²⁰⁰Re

Fukuda et al. reported the discovery of ²⁰⁰Re in the 2026 article “First Observation of Twenty-two Exotic Isotopes Using a ²⁰⁸Pb Primary Beam at RIBF” ([2026Fu06](#)). A 345-MeV/nucleon ²⁰⁸Pb from the RI Beam Factory at RIKEN in Japan, impinged on 2–5 mm thick Be targets and resulting fragments were separated and identified with the large-acceptance two-stage BigRIPS separator “Consequently, a total of 17 new neutron-rich isotopes were identified for the first time in this study: ¹⁷⁹Ho, ^{181,182}Er, ^{184–186}Tm, ^{188,189}Yb, ¹⁹¹Lu, ^{193,194}Hf, ^{195,196}Ta, ^{198,199}W, and ^{200,201}Re.”
