

²⁰⁸Ra

The 1967 paper “On-line alpha spectroscopy of neutron-deficient radium isotopes” by Valli et al. described the observation of ²⁰⁸Ra ([1967Va22](#)). ¹⁹⁷Au targets were bombarded with ¹⁹F and ²⁰⁶Pb targets were bombarded with ¹²C at the Berkeley HILAC. Products were slowed and deposited to be placed in front of a Si(Au) surface barrier detector. Results were presented in a table, giving a half-life of 3.8(2) s.
