

## $^{212}\text{Ra}$

The 1967 paper “On-line alpha spectroscopy of neutron-deficient radium isotopes” by Valli et al. described the observation of  $^{212}\text{Ra}$  ([1967Va22](#)).  $^{197}\text{Au}$  targets were bombarded with  $^{19}\text{F}$  and  $^{206}\text{Pb}$  targets were bombarded with  $^{12}\text{C}$  at the Berkeley HILAC. Products were slowed and deposited to be placed in front of a Si(Au) surface barrier detector. Results were presented in a table, giving a half-life of 0.4(2) s.
