

⁷⁴Br-1

Isomerism was first established in ⁷⁴Br by H.Schmeing et al. in 1974 at Chalk River Nuclear Laboratories, Chalk River, Canada ([1974Sc28](#)). The 46 m isomer was reported by Hollander in 1953 [[1953Ho53](#)] and the 25.4 m ground state in 1960 by Butement and Boswell [[1960Bu22](#)], however, the latter did not claim the observation as a separate state.
