

## <sup>99</sup>Tc-1

The 6.0066 h isomer of <sup>99</sup>Tc was first observed in 1938 by E.Segre and G.T.Seaborg at Lawrence Berkeley National Laboratory, Berkeley, California ([1938Se01](#)). Although they did not assign this activity to <sup>99</sup>Tc they measured it following the decay of a 65 h activity of Molybdenum which had been assigned to <sup>99</sup>Mo earlier in the same year ([1938Sa01](#)).
