

## **$^{187}\text{Hg-1}$**

The 2.4 m isomer of  $^{187}\text{Hg}$  was first observed in 1979 by P.Dabkiewicz et al. at CERN, Geneva, Switzerland ([1979Da06](#)). The two  $\alpha$ -decaying half-lives of the ground state and isomer had been measured earlier but were assigned to the same state in  $^{187}\text{Hg}$  populating different states in  $^{183}\text{Pt}$  ([1970Ha18](#))
