ε,β<sup>+</sup> radiations

1362 level: from γ intensity balance, %ε+β<sup>+</sup>=-0.027 14. This non-physical result may be due to poor knowledge of γ-ray intensities from the decay of the 4.6 min <sup>100</sup>Rh.

‡ Placement from the Adopted Gammas.

# 2000Ge01 point out that a γ ray close to this energy in (α,2nγ) experiment shows coincidence in 687γ gate, suggesting that 1536γ may be from a level near 2762 keV.

@ From the Adopted Gammas.
