† [2005Lu21](#) state 0.1 keV as the systematic uncertainty in energy determination.

‡ Uncertainty varies from 3% for strong transitions to 20% for weaker ones. When no intensity is listed, the peak has very small intensity or overlapped by other transitions.

$^\#$ From β decay studies, not seen by [2005Lu21](#).

$^\text{@}$ Placement of transition in the level scheme is uncertain.
