[†] Rounded-off values from Adopted Levels.

[‡] γ intensity data are used by the authors to restrict J^π assignments. No E_γ or I_γ data are explicitly given. Levels with $J^\pi=0^\pm, 1^\pm, 2^\pm$ and 3^- are expected to be populated. Absence of feeding suggests $J^\pi=3^+$ or ≥ 4 .

$J^\pi=1^-, 2^-, 3^-$ for 705.7+708.8.

@ $J^\pi=1^+, 2^-, 3^-$ for 1001.8+1002.6.

& $J^\pi=1^-, 2^-$ for E=1012.6+1012.7+1013.2.

^a av res capture feeds a doublet with one member having $J^\pi=1^+$ and the other $\pi=-$.

^b The adopted J^π is 2⁺.
