 ^{11}N Levels

E(level)	J^π	$T_{1/2}$	Comments
0	$1/2^+$	0.83 MeV 3	E(level): from $^{11}\text{N}_{\text{g.s.}}=E_{\text{res}}=1.49$ MeV 6, see comments In the Adopted Levels data set. for $^1\text{H}(^{10}\text{C},\text{P})$ the reported ground state energy $E_{\text{res}}=1.54$ MeV 2 from (2006Ca05) lies above the adopted ground state energy $E_{\text{res}}=1.49$ MeV 6. The energies of higher excited states are deduced assuming $^{11}\text{N}_{\text{g.s.}}=E_{\text{res}}=1.49$ MeV 6. E(level): from $E_{\text{res}}=1.54$ MeV 2 (2006Ca05). See also 1.27 MeV +18-5 (2000Ma62) and $E_{\text{res}}=1.30$ MeV 4 (1996Ax01); (2000Ma62) is a reanalysis of (1996Ax01) with additional data. The two experimental results (2006Ca05) and (2000Ma62) are in poor agreement; the precision of (2006Ca05) was found to dominate any weighting. Γ : from $\Gamma=0.83$ MeV 3 (2006Ca05), also see $\Gamma=1.44$ MeV 20 (2000Ma62) and $\Gamma=0.90$ MeV +10-20 (1996Ax01).
