$\gamma(^{116}\text{I})$

R(0°/117°) is the angular intensity ratio by setting gates on the 0° and 117° axes of $\gamma\gamma$ matrix; R \approx 1 if both the gating observed transitions are stretched and of the same mult; R \approx 0.6 if gate is on $\Delta J=2$ stretched and observed transition is $\Delta J=1$, dipole; R \approx 1.6 if gating transition is $\Delta J=1$ stretched dipole and observed transition is $\Delta J=2$ stretched. R values are for $\Delta J=2$, stretched quadrupole transitions, unless otherwise stated.
