<sup>†</sup> Energy values are from  $^{119}\text{Sn}(t,\alpha)$ , except as noted.

**Adopted Levels, Gammas (continued)** **$^{118}\text{In}$  Levels (continued)**

<sup>‡</sup> Assignment of 1<sup>+</sup> state to g.s. is based on measurements of E $\beta$  in  $^{118}\text{In}$   $\beta^-$  decay (5.0 s, 4.45 min) ([1964Ka10](#)). In [1993Au05](#), the E $\beta$  value of 4310 keV, given by [1987GaZO](#), for  $\beta^-$  feeding from 5.0-s state to g.s. was used as the input for evaluation of the Q( $\beta^-$ ) value.

<sup>#</sup> From difference of E $\beta$ (to g.s.)=4200 300 in  $^{118}\text{In}$   $\beta^-$  decay (5.0 s) and E $\beta$ (to 2963 level)+E(2963 level)=4263 100 in  $^{118}\text{In}$   $\beta^-$  decay (4.45 min) ([1964Ka10](#)).

<sup>@</sup> From E(5<sup>+</sup> level)+E(138.5 $\gamma$ )=198.

 **$\gamma(^{118}\text{In})$**
