

$^{122}\text{Sn}(^7\text{Li},\alpha 2n\gamma)$  **2009Wa02**

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	Jun Chen	NDS 174, 1 (2021)	15-Apr-2021

Data for decays of the isomers populated in this reaction ([2009Wa02](#), [2007Ju06](#)) are also presented in  $^{123}\text{Sb}$  IT decay.

**2009Wa02:** E=54 MeV  $^7\text{Li}$  beam was produced from the 14UD Pelletron at the Australian National University. Target was 3.5 mg/cm<sup>2</sup> enriched  $^{122}\text{Sn}$ .  $\gamma$  rays were detected with the CAESAR array of six Ge detectors with BGO anti-Compton shields and two LEPS detectors; conversion electrons were detected with a cooled Si(Li) detector. Measured  $E\gamma$ ,  $I\gamma$ ,  $E(\text{ce})$ ,  $I(\text{ce})$ ,  $\gamma\gamma$ -coin,  $\gamma\gamma(\theta)$ ,  $\gamma(t)$ ,  $\gamma\gamma(t)$ . Deduced levels,  $J$ ,  $\pi$ , isomer  $T_{1/2}$ , conversion coefficients,  $\gamma$ -ray multipolarities, mixing ratios, branching ratios, transition strengths. Comparisons with theoretical calculations. Systematics of neighboring Sb isotopes. [2009Wa02](#) also performed a second experiment on  $^{123}\text{Sb}$  isomers using Yb,Lu,W,Os( $^{136}\text{Xe},\text{X}$ ) with E=6.0-6.2 MeV/nucleon at ANL. See more details in  $^{123}\text{Sb}$  IT decay.

**1985Pi02:** E=27 MeV  $^7\text{Li}$  beam was produced from the Stony Brook FN tandem accelerator. Target was  $\approx 10$  mg/cm<sup>2</sup> isotopically enriched  $^{122}\text{Sn}$ .  $\gamma$  rays were detected with coaxial Ge(Li) detectors. Measured  $E\gamma$ ,  $\gamma\gamma$ -coin,  $\gamma(\theta)$ . Deduced levels.

#### Additional information 1.

**2007Ju06:** E=35 MeV beam was provided by 14UD Pelletron accelerator at the Australian National University. Target was 3.5 mg/cm<sup>2</sup>  $^{122}\text{Sn}$ .  $\gamma$  rays were detected with CAESAR Ge detector array and three Compton-suppressed Ge detectors. Measured  $E\gamma$ ,  $I\gamma$ ,  $\gamma\gamma$ -coin,  $\gamma(t)$  using pulsed beam. Deduced half-life of 2614 level.

 $^{123}\text{Sb}$  Levels

E(level) <sup>†</sup>	$J^\pi$ <sup>‡</sup>	$T_{1/2}$	Comments
0.0	$7/2^+$		
160.20 21	$5/2^+$		
1030.20 21	$9/2^+$		
1088.52 21	$11/2^+$		
1260.31 20	$9/2^+$		
1337.41 24	$9/2^+$		
1655.91 18	$11/2^-$		
1773.4 11	(11/2)		E(level), $J^\pi$ : level proposed in <a href="#">1985Pi02</a> only.
2037.49 23	$15/2^-$	37.3 ns 8	$T_{1/2}$ : from $\gamma\gamma(t)$ ( <a href="#">2009Wa02</a> ).
2044.1 3	$15/2^+$		
2237.8 3	$(19/2^-)$	214 ns 3	$T_{1/2}$ : from $\gamma\gamma(t)$ ( <a href="#">2009Wa02</a> ).
2338.3 3	$(15/2^+)$		
2385.4 3	$(17/2,19/2)^-$		
2485.9 3	$19/2^+$	0.7 ns 2	$T_{1/2}$ : from centroid-shift analysis ( <a href="#">2009Wa02</a> ).
2613.4 4	$23/2^+$	65 $\mu\text{s}$ 1	$T_{1/2}$ : from summed double gated time spectra for 127-442-956-1089 cascade ( <a href="#">2009Wa02</a> ). Other: 66 $\mu\text{s}$ 4 from <a href="#">2007Ju06</a> (pulsed beam timing).

<sup>†</sup> From a least-squares fit to  $\gamma$ -ray energies, assuming  $\Delta E\gamma=0.3$  keV, except for 436 $\gamma$  where 1 keV is assumed in the fitting.

<sup>‡</sup> Proposed by [2009Wa02](#) based on  $\gamma\gamma(\theta)$ ,  $\gamma$ -decay pattern, analog states in  $^{121}\text{Sb}$ , and known assignments for low-lying states, unless otherwise noted. When considered in Adopted Levels, these assignments are placed inside parenthesis by the evaluator if there is no firm evidence from other studies.

2338.3	(15/2 $^+$ )	1249.7		1088.52	$11/2^+$			Mult.: M1 or E1 from $\alpha(\text{exp})=0.2$ 2 ( <a href="#">2009Wa02</a> ).
2385.4	(17/2,19/2) $^-$	147.5		2237.8	$(19/2^-)$	D		
2485.9	$19/2^+$	347.9 100.4		2037.49 2385.4	$15/2^-$ $(17/2,19/2)^-$	E1	0.187	$E_\gamma$ : from figure 1 of <a href="#">2009Wa02</a> , 100.5 in table II. Mult.: from $\alpha(\text{exp})=0.1$ 2 in <a href="#">2009Wa02</a> .
2613.4	$23/2^+$	127.4	97.4 11	2485.9	$19/2^+$	(E2)	0.699	$E_\gamma$ : other: 127.6 ( <a href="#">2007Ju06</a> ). Mult.: $\delta(O/Q)=+0.01$ 6 from $(127\gamma)(442\gamma)(\theta)+(127\gamma)(956\gamma)(\theta)+(127\gamma)(1089\gamma)(\theta)$ : $A_2=+0.106$ 25, $A_4=+0.006$ 36 ( <a href="#">2009Wa02</a> ); M3 ruled out by RUL; E2 preferred since M2 would require a large $B(M2)$ .
		375.7	2.6 6	2237.8	$(19/2^-)$	[M2]	0.0671	

<sup>†</sup> Additional information 2.<sup>‡</sup> From [2009Wa02](#).# From analysis of  $\gamma\gamma(\theta)$  in [2009Wa02](#), unless otherwise noted. The evaluator has replaced E2 from [2009Wa02](#) with Q and E1 with D, since magnetic or electric nature of a transition cannot be determined based on  $\gamma\gamma(\theta)$ . Assignments in square brackets are assumed by [2009Wa02](#), without any experimental evidence.

$^{122}\text{Sn}({}^7\text{Li}, \alpha 2n\gamma)$  2009Wa02
