

$^{64}\text{Ni}(^{64}\text{Ni},3n\gamma)$ **2005Mb05,2005Ma84**

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	J. Katakura	NDS 112, 495 (2011)	1-Jan-2010

2005Mb05,2005Ma84: E-255, 261 MeV. Measured E_γ , I_γ , $\gamma\gamma$, $\gamma\gamma(\theta)$, $\gamma\gamma(\text{lin pol})$.

All data are from 2005Mb05. The two papers are by the same group.

XUNDL data set compiled by B. Singh (McMaster), December 20, 2005, is consulted.

Octupole correlations deduced through the observation of interband E1 transitions.

[†] From $\gamma\gamma(\theta)$ and $\gamma\gamma(\text{lin pol})$, but the asymmetric values and the coefficients of angular correlation are not given excepting 777 keV transition.

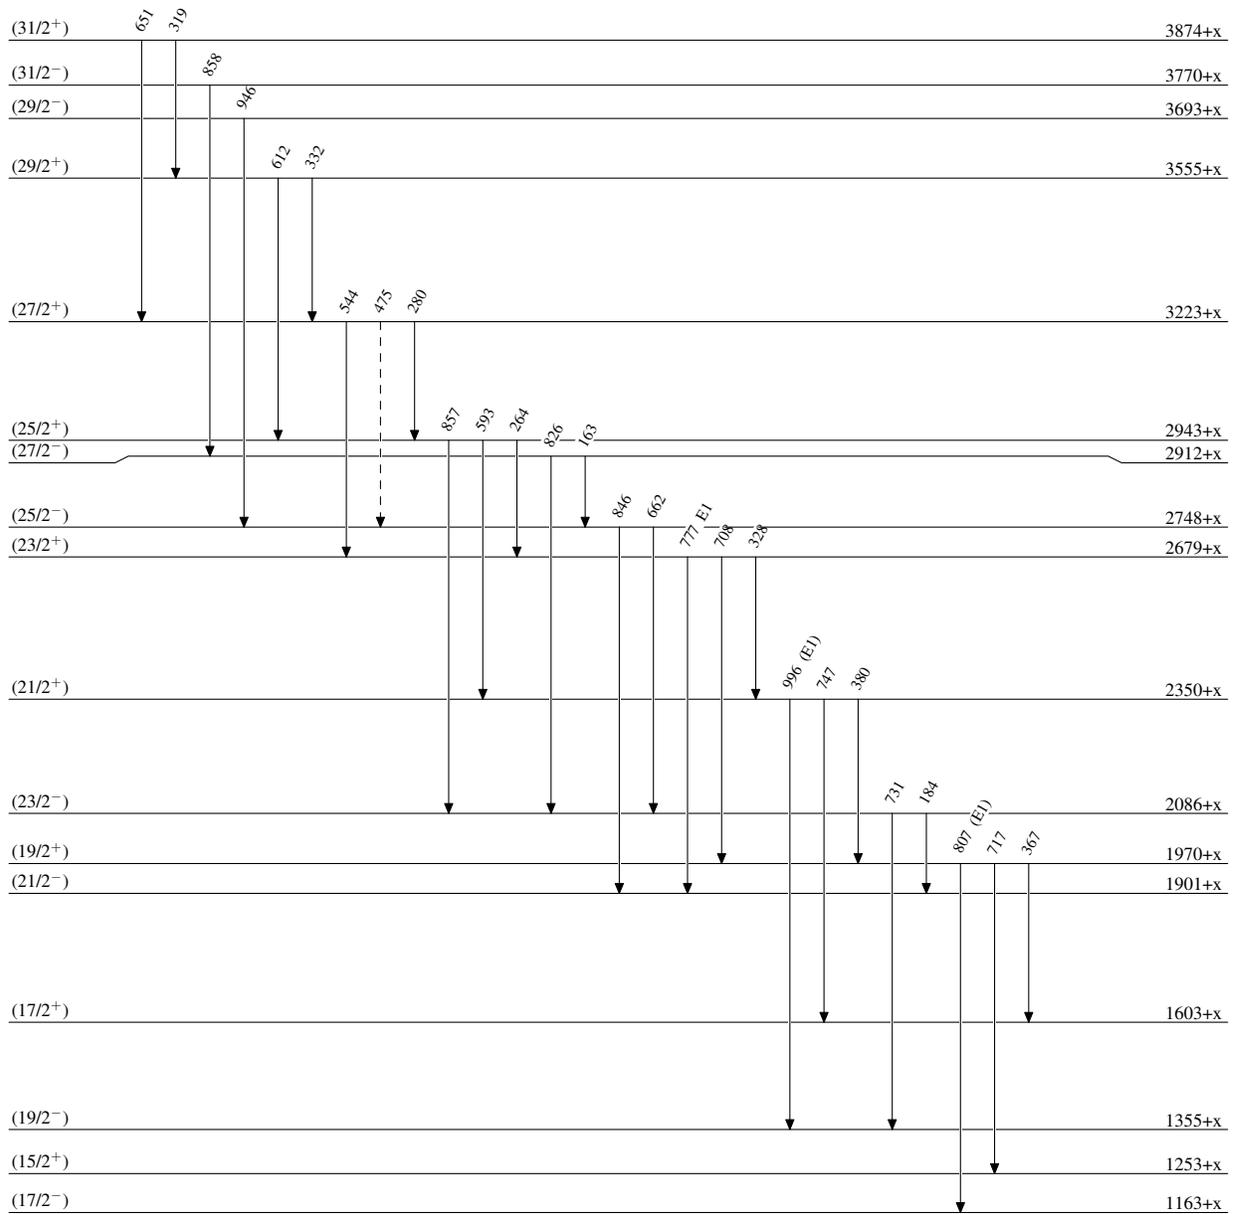

[‡] $\Delta J=1, E1$ from asymmetry parameter and polarization coefficient= $+0.03$ 3; $A_2=-0.27$ 2, $A_4=+0.00$ 3 from angular distribution.

[#] Placement of transition in the level scheme is uncertain.
