

$^{124}\text{Te}(\text{d},\text{p}) \quad \textcolor{blue}{1999\text{Ho01}, 1998\text{Ho16}, 1969\text{Gr24}}$ 

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	J. Katakura	NDS 112, 495 (2011)	1-Jan-2010

[1999Ho01](#): E=17 MeV, enriched target 90.7%, FWHM=4 keV (also [1998Ho16](#)).

[1969Gr24](#): E=7.5 MeV, multigap mag spect, enriched target 93.9%, Q=4344 keV 8, FWHM≈12 keV.

[1964Jo12](#): E=14.8 MeV. FWHM=40 keV.

[1967Sp09](#): Q=4322 keV 10.

 $^{125}\text{Te}$  Levels

For relative population intensity: see [1999Ho01](#) (below 2526 keV) and [1998Ho16](#) (above 2542 keV).

<sup>†</sup> From 1999Ho01 for levels below 2526-keV level, from 1998Ho16 for levels above 2542-keV and below 3330-keV and from 1969Gr24 for levels above 3334-keV, unless otherwise indicated. From the comparison of the energies of 1999Ho01 with those author's ( $n,\gamma$ ) values, the uncertainties appear to be small by a factor of about 3. When used in Adopted Levels, the evaluators have increased the uncertainties given by 1999Ho01 by this factor.

<sup>‡</sup> Authors' table gives 3.86 MeV in 1969Gr24; the evaluators read this as 3386 keV from the spectrum in 1969Gr24.

# Possibly belongs to  $^{127}\text{Te}$ .

@ Partly belongs to  $^{129}\text{Te}$ .

& From DWBA analysis in 1969Gr24. For higher excited level, L assignments are uncertain.

<sup>a</sup> From DWBA (1969Gr24);  $\Sigma((2J+1)C^2S)=0.66$  (2d5/2), 0.48 (1g7/2), 0.91 (3s1/2), 3.7 (1h11/2), 2.2 (2d3/2), 1.3 (2f7/2), 1.8 (3p3/2), 1.0 (3p1/2).
