

$^{100}\text{Mo}(^{34}\text{S},4n\gamma):\text{SD}$ [1998Se10,1997Wi02](#)

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	Balraj Singh	NDS 93, 33 (2001)	11-May-2001

See (HI,xn γ) ([1984To10](#)) for normal-deformed states.

[1998Se10](#) (also [1997Pa42](#)): E=155 MeV. Measured E γ , $\gamma\gamma\gamma$ using EUROGAM ii array with 54 Ge detectors including 24 Clover type. Deduced four SD bands.

[2000PaZZ](#): E=155 MeV. Measured E γ , I γ , $\gamma\gamma$ (triples and quadruples) $\gamma\gamma(\theta)(\text{DCO})$, $\gamma(\text{lin pol})$ using EUROGAM 2 array. Preliminary report; full details are not yet available.

[Additional information 1.](#)

[1997Wi02](#): $^{100}\text{Mo}(^{34}\text{S},4n\gamma)$ E=145 MeV. Measured E γ , $\gamma\gamma\gamma$ with 8π array (20 Ge detectors and 71 BGO detectors). Deduced SD band.

 ^{130}Ce Levels

E(level)	J $^{\pi}$	Comments
x [@]	J $\approx(18)$	J $^{\pi}$: 899 transition estimated as 22 to 20. Positive parity proposed by 1998Se10 . This level may deexcite by an 866 γ followed by a 956 γ as indicated by the alignment plot in figure 3 of 1998Se10 . 2000PaZZ show the ordering as 864 γ -956 γ -834 γ , followed by 864 γ feeding the 10 ⁺ level of g.s. band.

† Possible feeding of 14⁻, 16⁻ and 17⁻ states of 2-quasiproton band (2000PaZZ).

‡ 2000PaZZ show a cascade of 832γ-(757γ-675γ) deexciting this level, followed by possible feeding of 14⁺ level of g.s. band.

2000PaZZ show an 1175γ deexciting this level, followed by possible feeding of 22⁺ level of g.s. band.

@ Band(A): SD-1 band (1998Se10). Percent population=0.6 (1998Se10). Configuration=(ν6¹)(ν1/2[411]), α=0. The band may continue downward with four more transitions of 866, 956, 866 and 834 keV, but the ordering of these γ rays in the lowest part of the band is not yet established. 2000PaZZ suggest the ordering as 864γ-956γ-834γ followed by 864γ feeding the 10⁺ level of g.s. band.

& Band(B): SD-2 band (1998Se10,1997Wi02). Percent population=1.0 (1998Se10), 0.5 (1997Wi02). Configuration=(ν6¹)(ν7/2[523]), α=0.

^a Band(C): SD-3 band (1998Se10). Percent population=0.5 (1998Se10). Configuration=(ν6¹)(ν1/2[411]), α=1, possibly signature partner of SD-1 band.

^b Band(D): SD-4 band (1998Se10). Percent population=0.4 (1998Se10). Configuration=(ν6¹)(ν7/2[523]), α=1, possibly signature partner of SD-2 band.

γ(¹³⁰Ce)

Relative intensity plots are given by 1997Pa42.

† From 1998Se10. 1997Wi02 give energies of nine γ rays in SD-2 band.

‡ Triplet.

Doublet.

@ Associated with the lowest part of SD-1 band, but the ordering of the transitions is unknown. 2000PaZZ suggest the ordering as 864-956-834 followed by 864 feeding the 10^+ level of g.s. band.

& This γ not given by 2000PaZZ.

^a Placement of transition in the level scheme is uncertain.

^x γ ray not placed in level scheme.
