Full Evaluation	Yu. Khazov, A. A. Rodionov and S. Sakharov, Balraj Singh		NDS 104, 497 (2005)	10-Feb-2005

Includes $^{105}\text{Pd}(\text{³²S},2\text{p}3\text{n} γ)$ from [1995Kr08](#).[1996Jo13](#): E=180 MeV. Measured E γ , I γ , $\gamma\gamma$, $\gamma\gamma\gamma$ (particle) coin using GAMMASPHERE array of 57 HPGe detectors and microball array for particle detection. Deduced SD bands.[2001Ri20](#): E=173 MeV. Measured level lifetimes by Doppler-shift attenuation method for SD-1 (or highly-deformed) band. Deduced transition quadrupole moment.[1995Kr08](#): $^{105}\text{Pd}(\text{³²S},2\text{p}3\text{n} γ)$ E=152 MeV. Measured lifetimes by recoil-distance method.[132Nd Levels](#)

[†] From least-squares fit to $E\gamma$'s, assuming 1 keV uncertainty for each γ ray.

[‡] As proposed by 1996Jo13 based on band assignments and comparison with model calculations.

[#] From recoil-distance Doppler-shift method (1995Kr08). Differential decay curve method used to analyze data.

@ Band(A): Yrast band.

& Band(B): Band based on 5⁻.

^a Band(C): Band based on 9⁻.

^b Band(D): SD-1 band (1996Jo13). Percent population=0.7 (1996Jo13). Probable configuration= $\nu i_{13/2}\nu h_{9/2}$, $\alpha=1$.

Q transition=4.2 2 (2001Ri20).

^c Band(E): SD-2 band (1996Jo13). Percent population=0.4 (1996Jo13). Probable configuration= $\nu i_{13/2}\nu h_{11/2}$. But a different configuration is proposed by 1997Pe27 leading to a positive parity for the band.

^d Band(e): SD-3 band (?) (1996Jo13). Percent population=0.4 (1996Jo13). Probable configuration= $\nu i_{13/2}\nu h_{11/2}$. SD-2 and SD-3 bands are proposed by 1996Jo13 as signature partners. But SD-3 band is suspect; it is not confirmed by 1997Pe27, who state that the γ rays reported by 1996Jo13 were not seen in mutual coincidence but were seen in coin with transitions in a highly-deformed band in ^{133}Nd , and with transitions in their HD-1 and HD-3 bands. This band is not included in the Adopted Levels, gammas.
