

¹³⁰Te(⁹Be,4n γ) 2006Ch51,1987Dr13

| Type | Author | History | Citation | Literature Cutoff Date |
|-----------------|--|---------|---------------------|------------------------|
| Full Evaluation | Balraj Singh, Alexander A. Rodionov And Yuri L. Khazov | | NDS 109, 517 (2008) | 22-Jan-2008 |

Includes ¹²⁸Te(⁹Be,2n γ) from 1987Dr13.

2006Ch51, 2007ChZZ: ¹³⁰Te(⁹Be,4n γ) E=45 MeV. Measured E γ , I γ , $\gamma\gamma$, $\gamma\gamma(\theta)$ (DCO) using an array of 14

Compton-suppressed HPGe detectors. The high-spin levels and gammas reported above the 11/2⁻ isomer. The details of this study were requested (by the evaluators) through an e-mail to the first author of 2006Ch51, but no reply was received as of July 20, 2007.

1987Dr13: ¹²⁸Te(⁹Be,2n γ) and ¹³⁰Te(⁹Be,4n γ) E=30-37 MeV. Levels are reported at 874, 951, 1955 and 2002; the details of this study are not available.

All data are from 2006Ch51, unless otherwise specified.

¹³⁵Ba Levels

| E(level) [†] | J ^{π‡} | T _{1/2} | Comments |

| 5235.8 ^a 9 | (33/2 ⁺) | | |
| 5850.2 ^a 9 | (35/2 ⁺) | | |

[†] From least-squares fit to E γ 's, assuming $\Delta(E\gamma)=0.3$ keV for each γ ray; normalized $\chi^2=0.6$. Levels above 2003 are from 2006Ch51 only.

[‡] From 2006Ch51, unless otherwise specified. The authors' assignments are based on earlier studies, measured DCO ratios and systematics of nuclei in this mass region. The assignments are the same in 'Adopted Levels', except that above 2000 keV, all are in parentheses due to lack of strong supporting arguments.

[#] Level from 1987Dr13, not reported by 2006Ch51.

¹³⁰Te(⁹Be,4nγ) **2006Ch51,1987Dr13** (continued)

¹³⁵Ba Levels (continued)

@ Band(A): νd_{3/2}, decoupled band (?). The band assignment is uncertain.

& Band(B): νh_{11/2} multiplet.

^a Band(C): γ cascade based on (21/2⁺).

^b Band(D): γ cascade based on 23/2⁻.

γ(¹³⁵Ba)

DCO values are from [2007ChZZ](#) (also plotted in figure 3 of [2006Ch51](#)) corresponding to data at 90° and 45° (or 135°) and gated on a ΔJ=2, quadrupole gated transition. Typical DCO is expected as 1.2 for ΔJ=2, quadrupole and 0.85 for ΔJ=1, dipole.

| E _γ [†] | I _γ [‡] | E _i (level) | J _i ^π | E _f | J _f ^π | Mult. [@] | Comments |
