241			E	
257	⁺		E	J ^π : L=2 in (³ He,d),(α,t). 4 ⁺ is tentatively assigned based on spectroscopic strengths.
259.5? 3	(7 ⁻)	114 ms 5	ABCD F	%IT=100 E(level): energy of isomer tentatively fixed in ¹³⁰ Te(¹¹ B,5nγ) on the basis of a weak 87.5γ. In ¹³⁸ Ba(p,3nγ), ¹³³ Cs(α,nγ) 1980SuZY place the isomer at 230.1-keV decaying by a 71.8γ, while 1985Mo01 tentatively place the isomer as slightly higher (x+230 keV) decaying by a highly converted, unobserved, low-energy transition. The transition strength for a single M4 87.5γ from this level results in an M4 transition strength which significantly exceeds the RUL, suggesting that either the placement is incorrect, or that the level decays by an additional, highly converted, unobserved low energy transition. T _{1/2} : from γ(t) in ¹³⁸ Ba(p,3nγ), ¹³³ Cs(α,nγ). J ^π : M1 280.7γ fom (8 ⁻).
