@ From [1997Pe06](#).

& Estimated by evaluators from $I(\gamma+ce)$ values in [1997Pe06](#) and using the theoretical conversion coefficients given here. $\Delta I\gamma$ values include 1.5% from conversion coefficients.

^a From R(DCO) value. R(DCO)≈2 for a quadrupole γ ray gated by a dipole γ ray. R(DCO)≈1 for a dipole γ ray.

^b From R(DCO) value. R(DCO)≈1 for a stretched quadrupole γ ray gated by a stretched quadrupole γ ray. R(DCO)≈0.5 for a dipole γ ray.

^c Total theoretical internal conversion coefficients, calculated using the BrIcc code ([2008Ki07](#)) with Frozen orbital approximation based on γ -ray energies, assigned multipolarities, and mixing ratios, unless otherwise specified.

^d Placement of transition in the level scheme is uncertain.
