Dataset based on unevaluated XUNDL file compiled by E. Thiagalingam and B. Singh (McMaster) from [2012Mu08](#).

**2012Mu08:** E=thermal neutrons from the Canada India Research Utility Services (CIRUS) reactor facility, Bhabha Atomic Research Center (BARC), Mumbai. Target $\approx$ 5.1 gm/cm<sup>3</sup> UAl<sub>3</sub> (17% enriched <sup>235</sup>U). Gamma rays were detected by two clover HPGe detectors equipped with anti-Compton shields, in coincidence mode. Measured E $\gamma$ , I $\gamma$ ,  $\gamma\gamma$ -coin. Deduced levels, J,  $\pi$ , isotopic yield, angular momentum distribution.
