
 ^{252}Cf SF decay 2010Li10, 1998Hw04, 1974CIZX

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	N. Nica	NDS 154, 1 (2018)	20-Nov-2018

Parent: ^{252}Cf : E=0.0; $J^\pi=0^+$; $T_{1/2}=2.645$ y 8; %SF decay=3.092 8

Dataset based on compiled (XUNDL) files from [1998Hw04](#) by J. Chenkin and B. Singh (McMaster) and from [2010Li10](#) by K. Abusaleem (University of Jordan) and B. Singh (McMaster).

[2010Li10](#): measured $E\gamma$, $I\gamma$, $\gamma\gamma(\theta)$ using the Gammasphere array with 101 detectors at LBNL. The 62 μCi α activity, ^{252}Cf source was placed between two 10 mg/cm² Fe foils.

[1998Hw04](#): measured $\gamma\gamma\gamma$ and higher with Gammasphere, 72 Compton-suppressed Ge detectors. Assignment based on Cs-Tc SF pairs.

[1974CIZX](#): measured γ , $\gamma\gamma$, $\gamma(t)$ with Ge(Li) detectors.

[1970Wa05](#): measured ce, ce(t).

Others: [1971Ho29](#), [1972ChYZ](#).

[2010Li10](#) extend the work of [1998Hw04](#) (both are related to each other by same experimental device and similar author teams).

[1998Hw04](#) reported 9 levels up to 2930 keV with 10 γ transitions, with no J^π assignments. [2010Li10](#) included the level scheme of [1998Hw04](#) and extended it up to 3974 keV with a total of 21 levels and 29 γ transitions; they also assigned γ multipolarities and J^π values, and used systematics. The combined level scheme is presumably population an 0.0+x (3⁻) isomer (but not touching the g.s.).

[1974CIZX](#), [1972ChYZ](#), [1971Ho29](#), and [1970Wa05](#) find low levels / low γ energies level scheme < 150 keV that reach the g.s. of ^{140}Cs and is overlapping the ^{140}Xe β^- decay scheme.

There is no overlap in between the levels scheme of [2010Li10](#) and [1974CIZX](#) (and the others).

 ^{140}Cs Levels

Based on their J^π assignments [2010Li10](#) conclude that there is no overlap between levels obtained in the spontaneous fission of ^{252}Cf and those with low spin known from the β^- decay. However because the generally poorer detection efficiency of the Gammasphere array for low $E\gamma$, the levels 0.0, 13.9, 64.6, 80.1, 103.0, 118.0, and 149.0 and their decaying γ transitions previously common to both ^{252}Cf SF decay and ^{140}Xe β^- decay are still assigned to this dataset.

[†] From least-squares fit to $E\gamma$'s, assuming $\Delta E\gamma=0.3$ keV for each γ ray.

[‡] Unless otherwise noted, from [2010Li10](#) based on systematics, the assumption that all transitions are stretched, the $(640.9\gamma)(594.3\gamma)(\theta)$ and $(454.7\gamma)(594.3\gamma)(\theta)$ measured angular correlations, and the $\alpha(54.8\gamma)$, [2010Li10](#) assigned (7⁻) and (6⁻) for the 249.7 and 194.9 levels respectively, with higher $\Delta J=2$ (E2) In-band transitions, and $\Delta J=1$ interband transitions. [2010Li10](#) used extensively the comparison with ^{138}I isotope ([2007Rz01](#)).

From [1974CIZX](#).

@ From Adopted Levels.

& From [1974CIZX](#), except where noted otherwise.

^a Band(A): Band based on (7⁻), $\alpha=1$. From [2010Li10](#). Possible configuration= $\pi(1g_{7/2})^5_{7/2} \otimes \nu(2f_{7/2})^3_{5/2}$.

^b Band(a): Band based on (6⁻), $\alpha=0$. From [2010Li10](#). Possible configuration= $\pi(1g_{7/2})^5_{7/2} \otimes \nu(2f_{7/2})^3_{5/2}$.

^c Band(B): Band based on (12). From [2010Li10](#).

 $\gamma(^{140}\text{Cs})$

I γ normalization: Photons per 1×10^5 fissions from [1974CIZX](#) that can be applied only for γ transitions from this reference (but not for γ 's from [2010Li10](#)).

[†] From 2010Li10 unless otherwise noted.[‡] Unless otherwise noted, from e-mail reply to B. Singh of S.H. Liu (first author of 2010LI10 on March 22, 2010). Uncertainties are specified as 10% to 30% from strong to weak transitions. The evaluator adopted 10% for $I_\gamma=2-10$, 20% for $I_\gamma=0.5-2$ and 30% for $I_\gamma<0.5$.[#] Unless otherwise noted from $\gamma\gamma(\theta)$ data or estimated total conversion coefficient (2010Li10).

@ From 1974CIZX.

& Placement of transition in the level scheme is uncertain.

^x γ ray not placed in level scheme.
