

$^{124}\text{Sn}(^{24}\text{Mg},\alpha 3n\gamma)$ [2011Bh01](#)

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	N. Nica	NDS 187,1 (2023)	12-Oct-2022

Includes $^{130}\text{Te}(^{16}\text{O},5n\gamma)$.

2011Bh01: $E(^{24}\text{Mg})=107$ MeV, Measured $E\gamma$, $I\gamma$, $\gamma\gamma$, $\gamma\gamma(\theta)$ (DCO) using INGA array (18 Compton-shielded clover detectors); $E(^{16}\text{O})=80\text{-}85$ MeV, measured $E\gamma$, $I\gamma$, $\gamma\gamma$, $\gamma\gamma(\theta)$ (DCO) using GDA array (9 Compton-shielded Ge detectors, 1 clover, 14 BGO).

2003LiZU: $^{130}\text{Te}(^{16}\text{O},5n\gamma)$ $E(^{16}\text{O})=85$ MeV; only give level scheme that generally confirms that of [2011Bh01](#).

All the data are from [2011Bh01](#). ^{141}Nd Levels

$^{124}\text{Sn}(^{24}\text{Mg},\alpha 3n\gamma)$ **2011Bh01 (continued)** ^{141}Nd Levels (continued)

E(level) [†]	J^π [‡]	Comments
8646.6 6		
9365.3 [@] 6	49/2 ⁻	J ^π : From Table I of 2011Bh01 , not listed in authors' Fig. 1.

[†] From least-squares fit to Eγ data.[‡] J^π values are from [2011Bh01](#) – they can differ from those in Adopted Levels, Gammas dataset.

From Adopted Levels.

@ Band(A): Band based on 21/2⁻.& Band(B): Possible 5-qp band based on 29/2⁻. Proposed ([2011Bh01](#)) configuration= $\nu h_{11/2}^{-1} \otimes \pi(d_{5/2}g_{7/2})_6^{-2}(h_{11/2})_{10}^2$.a Band(C): Band based on 33/2⁻. $\gamma(^{141}\text{Nd})$

DCO ratios correspond to angles of 99° and 153° with gates on stretched quadrupoles and dipoles. Expected values are 1.0 for stretched quadrupoles and 0.5 for stretched dipoles when gating on quadrupoles. Expected values are 2.0 for stretched quadrupoles and 1.0 for stretched dipoles when gating on dipoles. Mixed transitions will have ratios in between these values.

[†] Uncertainty of 0.2 keV is assigned on the basis of a general comment in [2011Bh01](#) that the uncertainty in energy is less than 0.15 keV.

[‡] From [2011Bh01](#) based on DCO measurements by assuming that dipole transitions are M1's, quadrupole transitions are E2's, and the D+Q are M1+E2 (only those transitions having appreciable E2 components were given). There are no E1 assignments. All transitions are stretched. These assignments can differ from those in Adopted Levels, Gammas dataset.

[#] DCO for gate on stretched dipole.

[@] DCO for gate on stretched quadrupole.

[&] Total theoretical internal conversion coefficients, calculated using the BrIcc code ([2008Ki07](#)) with Frozen orbital approximation based on γ -ray energies, assigned multipolarities, and mixing ratios, unless otherwise specified.

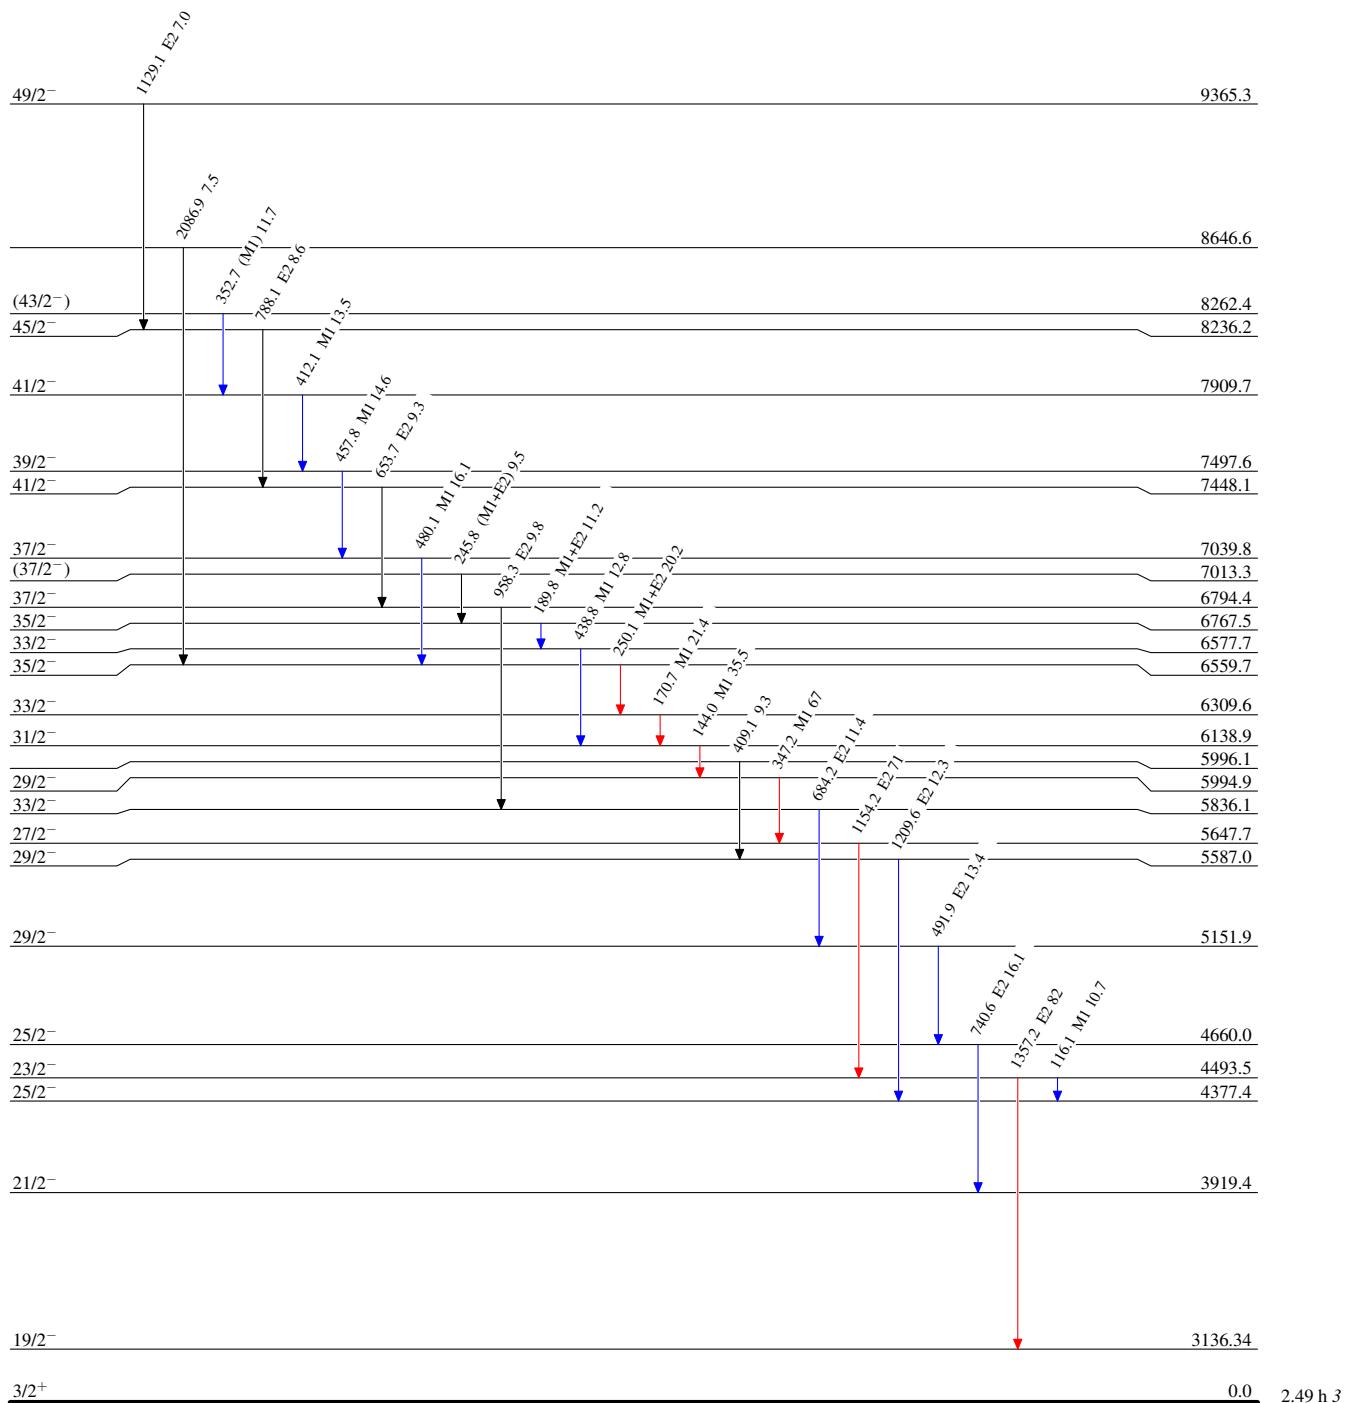

^x γ ray not placed in level scheme.
