† Reported in 2005Ri17 only.

‡ As quoted by 2000O110. The assignments are based on $\gamma\gamma(\theta)$ (DCO) data for selected transitions and expected band structures from model calculations. All the J^π's are put in parentheses (evaluator) since the J^π's of lower states and those of bandheads are not considered as firmly established.

Band(A): Band based on (17/2⁻), $\alpha=+1/2$. Above 27/2⁻, strong dipole (M1) transitions suggest possible magnetic-rotational character with configuration= $\pi h_{11/2}^2 \nu h_{11/2}^{-1}$ (2000O110).

@ Band(a): Band based on (17/2⁻), $\alpha=-1/2$. See comments for its signature partner.

& Band(B): Yrast structure (irregular) based on $\nu h_{11/2}$. Probably a weakly deformed structure.

^a Band(C): Band based on (21/2).

^b Band(D): Band based on (13/2⁺). Possibly based on $\nu i_{13/2}$ orbital.

^c Band(E): Band based on (11/2⁻).

^d Band(F): Band based on (11/2⁻).

^e Band(G): γ cascade based on (19/2⁻).
