<sup>†</sup> From least-squares fit to E $\gamma$ .

<sup>‡</sup> Seen in  $^{144}\text{Sm}(\alpha, p4n\gamma)$  by 1976Wi09, not reported in 1996Pi11.

<sup>#</sup> From DCO ratios, excit, band assignment. A DCO ratio of 1.4 is taken typically to represent  $\Delta J=2$  for Q or  $\Delta J=0$  for D transition. A ratio of 0.8 typically represents  $\Delta J=1$ .

<sup>@</sup> From  $(\alpha, p4n\gamma)$  (1988Mu12).

<sup>&</sup> Band(A): Cascade-1,  $\pi=-$  although cascade is well established the decreased intensity of lower three members of the cascade indicates alternate decay paths via weaker transitions not seen here.

<sup>a</sup> Band(B): cascade-2, possibly  $\pi=(+)$ .

<sup>b</sup> Band(C): cascade-3.

† [Additional information 2.](#)

‡ From DCO ratios and intensity balance. Stretched Q are assumed to be E2. A DCO ratio of 1.4 is taken typically to represent a stretched Q or  $\Delta J=0$  for a D transition. A ratio of 0.8 typically represents a stretched D.

# Uncertainty  $\geq 5\%$ , larger for weak and complex lines ([1996Pi11](#)).

@ Seen only by [1976Wi09](#).

& From  $^{142}\text{Nd}(^6\text{Li},5n\gamma)$  E=65 MeV.

**Band(A): Cascade-1,  $\pi=-$**  although cascade is well established the decreased intensity of lower three members of the cascade indicates alternate decay paths via weaker transitions not seen here

**Band(B): Cascade-2,** possibly  $\pi=(+)$

**Band(C): Cascade-3**
