

(HI,xn γ) 1999Id01

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Yu. Khazov, A. Rodionov and G. Shulyak		NDS 136, 163 (2016)	14-Jul-2016

1999Id01: $^{140}\text{Ce}(^{10}\text{B},4\text{n}\gamma)$ E=50 MeV, $^{139}\text{La}(^{13}\text{C},6\text{n}\gamma)$ E=98 MeV: measured E γ , $\gamma\gamma(t)$, $\gamma\gamma$ coin, $\gamma(\theta)$ at $\theta=35^\circ$, 60° , 90° and 150° , T_{1/2} of isomer. ^{146}Eu ; deduced levels, J $^\pi$, Ge detectors with BGO anti-Compton shield.

1971HaXM: La($^{12}\text{C},5\gamma$) E=81 MeV; measured E γ , I $\gamma(t)$, T_{1/2}. ^{146}Eu ; deduced levels, J $^\pi$, isomer. Cyclotron, Ge(Li) detector.

1980IsZZ, 1980LeZN: $^{140}\text{Ce}(^{10}\text{B},4\text{n})$, E not given; $^{142}\text{Nd}(^{7}\text{Li},3\text{n})$, E not given; measured E γ , I γ , $\gamma\gamma$ coin, E(ce), I(ce). ^{146}Eu ; deduced levels, γ branching.

The ^{146}Eu level scheme is mainly from result of **1999Id01** reaction measurements, J $^\pi$ assignment was made based on the angular distribution analysis and ce measurement (**1980LeZN**).

[†] If $\Delta E\gamma$ not given, ± 0.50 keV assumed for least-squares fit.

[‡] From a least-squares fit to E γ 's; $\Delta E\gamma=0.5$ assumed by evaluators; normalized $\chi^2=0.91$.

[#] From the angular distribution analysis and ce measurement.

[@] From $\gamma(t)$ **1980LeZN**.

[&] From $\gamma\gamma(t)$ with pulsed beam (**1999Id01**).

^a Possible configuration= $[\nu(f_{7/2}h_{11/2}i_{13/2}) \times \pi(d_{5/2}^{-1}h_{11/2}^2)]_{27^+}$ (**1999Id01**), see systematics of high spin isomers (**2005Od03, 2002Go06**).

[†] From 1999Id01, except as noted.

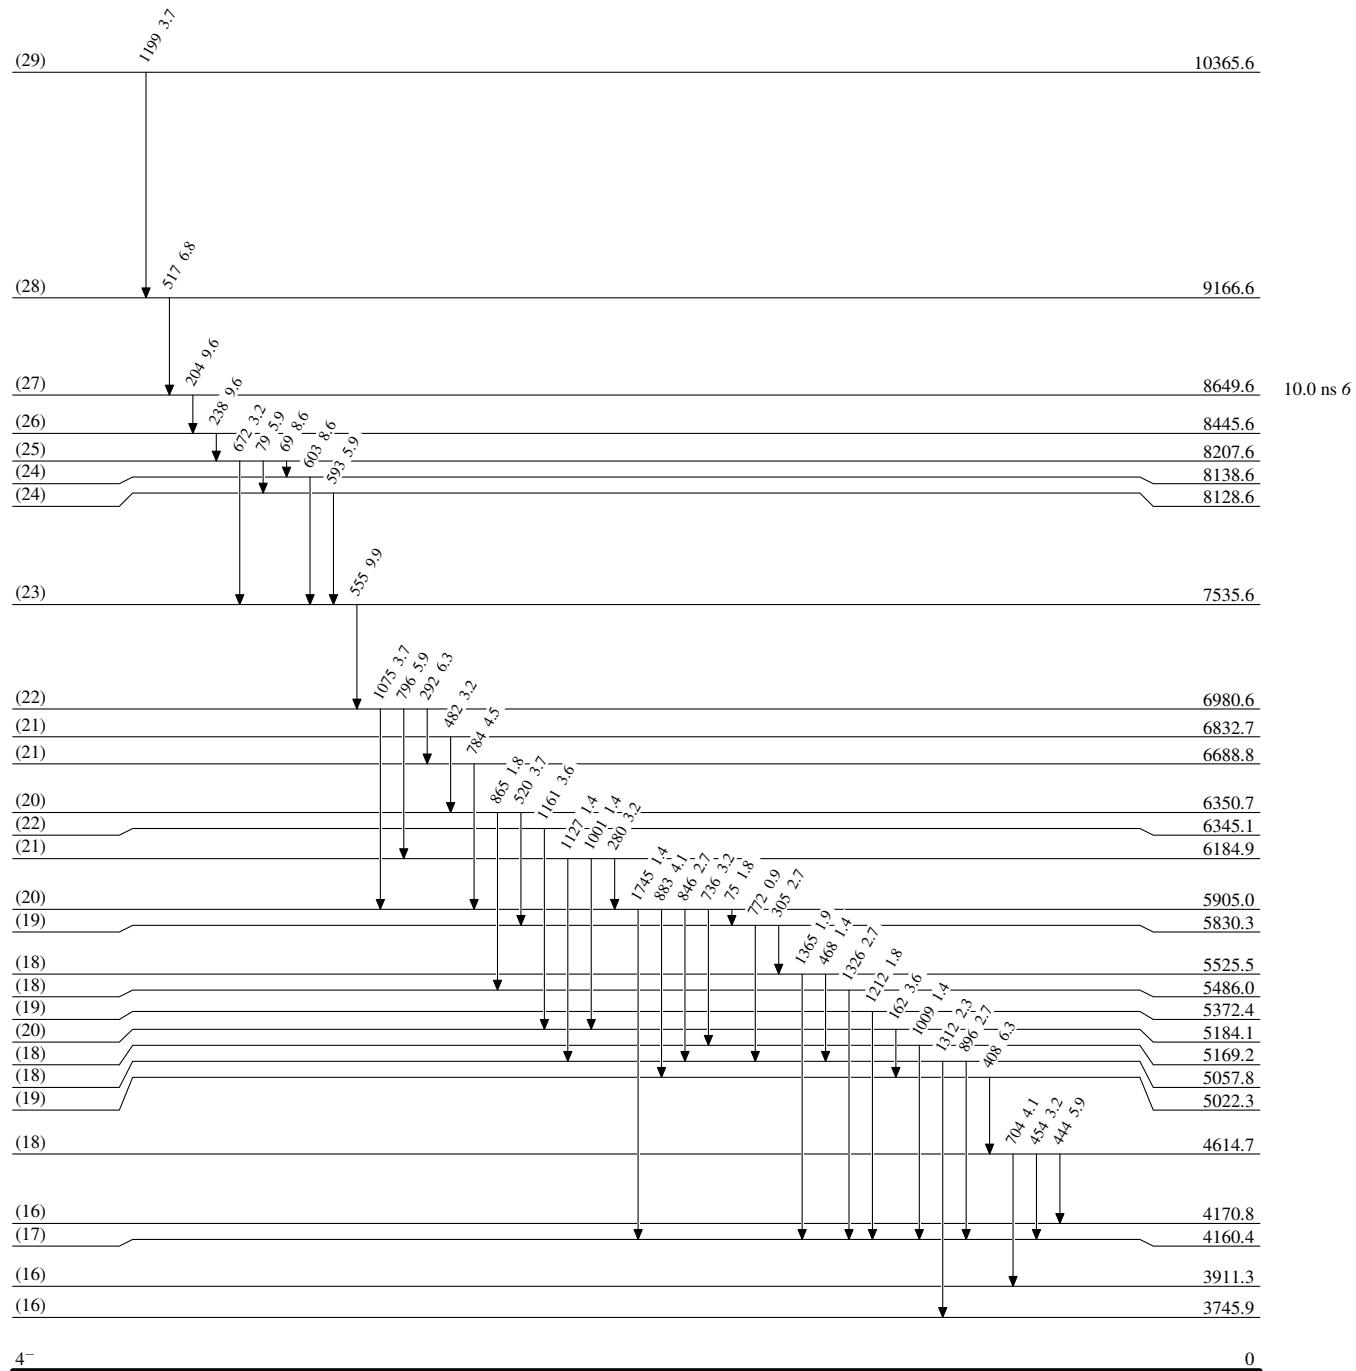

[‡] From 1980LeZN.

[#] From ce measurements by 1980LeZN.

[@] In fig. 1 of 1999Id01 this energy is given in figure brackets; the evaluators suppose that it is calculated by the authors.

[&] Obtained from fig. 1 of 1999Id01 by evaluators according to author's mark that 'the width of arrows is proportional to the intensities of transitions'; systematic inaccuracy $\Delta(I\gamma+ce) \approx 0.5$ for each transition intensity was estimated.

^a Additional information 1.
