

$^{147}\text{Sm}(\text{d,t}) \quad 1975\text{Oe01,1975Si03}$

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Yu. Khazov, A. Rodionov and G. Shulyak		NDS 136, 163 (2016)	14-Jul-2016

 $J^\pi(^{147}\text{Sm})=7/2^-$. 1975Oe01 : $^{147}\text{Sm}(\text{d,t})$, $E=17$ MeV; measured $\sigma(E_t, \theta)$. ^{146}Sm ; deduced levels, L, S, J^π . Tandem, Enge split-pole spectrograph, DWBA analysis. 1975Si03 : $^{147}\text{Sm}(\text{d,t})$, $E=14$ MeV; measured E_t at 30° . ^{146}Sm ; deduced levels. Enge split-pole spectrograph, FWHM ≈ 10 keV. ^{146}Sm Levels

4486 ^a					

[†] From [1975Oe01](#); ΔE=0.1% or 3 keV whichever is larger. ΔE=5-15 keV in [1975Si03](#) measurements.[‡] As assigned in [1975Oe01](#) from DWBA analysis.[#] dσ/dΩ in unit of mb/sr (max. value from [1975Oe01](#)).

 $^{147}\text{Sm}(\text{d},\text{t})$ 1975Oe01,1975Si03 (continued) **^{146}Sm Levels (continued)**

^a From 1975Oe01.

[&] From 1975Oe01. Those level with no L value could not be assigned to a unique L transfer or plausible L mixture.

^a Level weakly populated, $(d\sigma/d\Omega)_{\text{max}} \leq 0.03$ mb/sr. The levels that are not excited in other studies, were not included by the evaluators in the Adopted Levels.

^b One of states of unresolved doublet.

^c The state determined in 1975Si03 only.

^d Doublet; for L=1 $(d\sigma/d\Omega)_{\text{max}} = 0.12$, $C^2S = 0.02$, $J^\pi = 2$ to 5^+ .
