[†] From a least-squares fit to E γ 's, normalized $\chi^2=1.7$.

[‡] The value is not known exactly. It is supposed as 150 keV 110 higher g.s. (from systematics, 2012Au07).

From 'Adopted Levels'; not studied by 2004Kr14 but presented in fig. 1 of this paper as the basis of the level scheme.

@ From 2004Kr14 based on multiplicities of γ -transitions and the shell model treatment. Detailed shell-model configurations for many levels are given in table II of 2004Kr14.

& Band(A): Level sequence based on the J^π=18⁺ state. Possible configuration= $\pi(\text{h}_{11/2}^3 \text{d}_{5/2}^{-2})\nu\text{h}_{11/2}^{-1}$ and/or

$\pi(\text{h}_{11/2}^3 \text{g}_{7/2}^{-2})\nu\text{h}_{11/2}^{-1}$.

^a Band(B): Level sequence based on the J=19 state. Possible configuration= $\pi\text{h}_{11/2}\nu(\text{h}_{11/2}^{-3} \text{f}_{7/2}^2)$.

^b Band(C): Probable magnetic-dipole rotational band based on the state with J^π=(23⁺). Possible configuration= $\pi(\text{h}_{11/2}^3 \text{d}_{5/2}^{-2})\otimes\nu(\text{h}_{11/2}^{-3} \text{f}_{7/2}^2)$.

$\gamma(^{146}\text{Tb})$

R_{DCO}=(I _{γ_1} at 80°, gated with γ_2 at 140°) / (I _{γ_1} at 140°, gated with γ_2 at 80°) (obtained from sum gate of 590, 818, 390, and 760 keV dipole transitions, except as noted).

Asymmetry parameters $\Delta_{\text{IPDCO}}=\text{pol}=(aN(\text{perpendicular})-N(\text{parallel})) / (aN(\text{perpend.})+N(\text{parallel}))$ were measured and specified a polarization; parameter 'a' is a function of E γ (2004Kr14).

$\gamma(^{146}\text{Tb})$ (continued)

† From 2004Kr14, except as noted; $\Delta E\gamma=0.15$ was assumed by evaluators if unknown.

‡ From 2004Kr14, intensities are not given for weak transitions.

E1, M1 or E2 is from $\gamma\gamma(\theta)$ (DCO) and lin pol data as plotted in figure 7 of 2004Kr14. The mult=D, E1 or M1 corresponds to $\Delta J=1$ in most cases, except for two $\Delta J=0$ cases as indicated; mult=E2 or Q corresponds to $\Delta J=2$ transitions.

@ From 'Adopted Gammas'.

& Difference between corresponding $E\gamma$'s.

^a DCO from gate on $\gamma(590)$, $\Delta J=1$ transition.

^b [Additional information 2](#).

^c Placement of transition in the level scheme is uncertain.
