

$^{148}\text{Nd}(\text{d,t}),(\text{pol d,t})$ **1977St23,1977St22**

Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	N. Nica and B. Singh		NDS 181, 1 (2022)	9-Mar-2022

1977St23: E(pol d,t)=17 MeV; polarized beam produced by Lamb-shift source (McMaster; average polarization 0.75); used 95.4% enriched target; reaction products analyzed with Enge split-pole magnetic spectrograph and detected with position-sensitive proportional counter at focal plane; Si surface barrier detector used to measure elastically scattered deuterons; measurements done at 18 angles (6° – 57.5°), with spin “up” and “down”; several angles were measured with unpolarized beam as well; DWBA calculations (code DWUCK).

1977St22: E(d,t)=12 MeV; essentially same as **1977St23**, but with nuclear emulsions used to detect reaction products; measurements done at 9 angles.

1982Ja09: E=12.1 MeV, see $^{146}\text{Nd}(\text{d,p})$ dataset.

1980Lo06: E=17 MeV, enrich target, multi-angle spectrograph (10 angles, 7.5° – 52.5°), Si detector (elastic yield), nuclear emulsions. Spectrograph resolution: FWHM≈25 keV (**1977St23**); FWHM≈8 keV (**1977St22**); ≈12-15 keV (**1982Ja09**); FWHM=12 MeV (**1980Lo06**).

 ^{147}Nd Levels

1977St22 obtain cross sections for 2 angles with uncertainties: 15% relative, 25% absolute.

E(level) ^a	J ^π ^b	L [#]	S @	Comments
0.0	5/2 ⁻	3	0.06

 $^{148}\text{Nd}(\text{d,t}),(\text{pol d,t}) \quad 1977\text{St23}, 1977\text{St22 (continued)}$ **^{147}Nd Levels (continued)**

[†] Energies quoted with uncertainties of 2 keV are from [1977St22](#). Those of 5 keV are from [1980Lo06](#).

[‡] From DWBA and vector-analyzing power analysis ([1977St23](#)).

[#] L values are deduced from angular distributions and DWBA calc by [1977St23](#), except where noted.

[@] Spectroscopic factors are extracted from cross sections. Comparison is made with (d,t) strengths for similar states populated in N=87 isotones ([1977St22](#)).

[&] From [1980Lo06](#).

^a From [1980Lo06](#). Estimated uncertainty in S is $\approx 30\%$.

^b From [1982Ja09](#).

^c From [1982Ja09](#) using computer code DWUCK. Uncertainties in absolute cross sections range from 20% to 60% for weak or poorly resolved levels.
