

(HI,xn γ) 1995Sc25

| Type | Author | History Citation | Literature Cutoff Date |
|-----------------|---------|---------------------|------------------------|
| Full Evaluation | N. Nica | NDS 117, 1 (2014) | 1-Oct-2013 |

Production: (HI,xpyny) with ions: α ([1979Br28](#)), ^6Li , ^7Li ([1993KIZZ](#),[1987StZU](#),[1987StZV](#),[1988StZX](#)), ^{10}B ([1979Si08](#)), ^{12}C , ^{14}N , ^{16}O ([1980Ja16](#)), ^{13}C ([1995Id01](#)), ^{16}O ([1978BeYX](#)), ^{31}P ([1995Sc25](#)), ^{50}Ti , ^{65}Cu ([1980Bo07](#)), ^{130}Te ([1995Id01](#)).

Measured: γ , $\gamma(t)$ ([1978BeYX](#),[1979Si08](#),[1979Br28](#),[1980Bo07](#),[1980Ja16](#),[1980Kh06](#),[1982TaZS](#)), $\gamma(\theta)$, $\gamma\gamma$, ce ([1978BeYX](#),[1979Si08](#),[1979Br28](#),[1987StZU](#),[1987StZV](#),[1988StZX](#)), linear polarization ([1979Br28](#)).

The level scheme is a combination of the data of many groups, including the results of ^{144}Sm ($^6\text{Li},\text{xng}$), ^{144}Sm ($^7\text{Li},\text{xny}$) ([1993KIZZ](#),[1987StZU](#),[1987StZV](#),[1988StZX](#)), and the ^{122}Sn ($^{31}\text{P},\text{xny}$), ^{120}Sn ($^{31}\text{P},\text{xny}$) ([1995Sc25](#)) studies, with all level energies shifted up 90.1 keV. Out of a total of 31 excited states observed by [1995Id01](#), 8 levels from 5969 to 11795 keV are not confirmed by [1995Sc25](#) and have been left out.

[2007Po13](#),[2005Od04](#),[2005Od03](#),[2002GoZY](#): remeasured the 8618.6, 1.310 7 μs isomer.

[1980Vi01](#): search for α decay of high-spin isomers in ^{148}Tb with a $T_{1/2}=19$ ns; no evidence of α decay was observed.

 ^{148}Tb Levels
