|-----------------|---------------------------|-------------------|------------------------|
| Full Evaluation | Balraj Singh and Jun Chen | NDS 185, 2 (2022) | 23-Aug-2022            |

**1977Na27:** E(p)=18-26 MeV beams from the IMS and the INS SF cyclotrons of the University of Tokyo. Measured  $E\gamma$ ,  $I\gamma$ , prompt and delayed  $\gamma\gamma$ ,  $\gamma(\theta)$ , excitation functions. Authors assign multipolarities on the basis of the measured angular distributions; however, they do not quote  $A_4$  values because of the large uncertainties. Therefore, evaluators have treated these assignments as well as the spin assignments as tentative.  
**1977Na27** suggest that the 994.3-keV  $(15/2)^-$  and 1609.3-keV  $(19/2)^-$  states are members of a decoupled band based on the 496.3-keV  $11/2^-$  state (see also (HI,xnγ) data set).

 $^{149}\text{Eu}$  Levels

| E(level) <sup>†</sup> | $J^\pi$ <sup>‡</sup>    | Comments   |
|-----------------------|-------------------------|--|
| 0.0                   | $5/2^+$                 |  |
