Type	Author	History	Citation	Literature Cutoff Date
Full Evaluation	Balraj Singh and Jun Chen	NDS 185, 2 (2022)		23-Aug-2022

1965Ke09: E(d)=12 MeV from the Florida State University tandem. Measured proton spectra with a resolution of 0.1%. L-transfers based on cross section measurements at three angles.

Others:

1967Ve04: E(d)=12 MeV from the Niels Bohr Institute tandem. Measured proton spectra with FWHM=15 keV. Level reported up to 1940 keV, and σ data measured at two angles.

1967Jo04: E(d)=9.6 MeV from the Florida State University tandem. Authors refer to their unpublished work, and list seven levels: 0 with L=3, 380 with L=(1+3), 530 with L=1, 710 with L=1, 1030 with L=(1), 1170 with L=3 and 1490 with L=(1).

All data are from **1965Ke09**, unless otherwise stated.

 ^{149}Sm Levels

Cross section data from **1967Ve04** under comments are measured at 60°.

[†] From 1967Ve04 only.[‡] Tentative values based on three-angle data only. These L-values were not used for J^π assignments in the Adopted Levels.

For 280, 285 levels.

@ Authors give 3336. From authors' listed Q values, one gets 3636. Based on authors' spectrum, the latter value is correct.

& For 280+285.

^a For 700+712.
