

$^{148}\text{Nd}(^{11}\text{B},5\gamma), ^{124}\text{Sn}(^{36}\text{S},\text{p}5\gamma)$ **1982Be46,1999Ha04**

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	N. Nica	NDS 200,2 (2025)	22-Aug-2022

Experimental methods:

1982Be46: $^{148}\text{Nd}(^{11}\text{B},5\gamma)$ on enriched (90%) target with $E(^{11}\text{B})=50\text{-}68$ MeV. With Ge detectors measured $E\gamma$, $I\gamma$, $\gamma\gamma$ coincidences, projectile- γ delayed coincidences, $\gamma(\theta)$, and excitation functions.

1999Ha04: $^{124}\text{Sn}(^{36}\text{S},\text{p}5\gamma)$ with $E(^{36}\text{S})=160$ and 175 MeV. Measured γ 's with Gammasphere spectrometer using 67 or 93 Compton-suppressed Ge detectors.

 ^{154}Tb Levels

E(level) [†]	J^π [‡]	Comments
0+x [@]	(9 ⁻)	E(level): Four γ 's are reported (1982Be46) to depopulate this level; they would require $x>169$ keV, or more if any of these γ 's are in coincidence. These γ energies (and intensities) are listed among the unplaced γ 's, with appropriate comments.

0+z	513 ns 42	T _{1/2} : Weighted average of 574 ns 50, 580 ns 80, and 457 ns 40 (1982Be46) for γ 's of energy (and intensity) 53 (33 3), 60 (5.6 17), and 90 keV, respectively; authors assume these γ 's are all from the same level.	

[†] The absolute energies of the levels seen in these studies have not been determined. Values, relative to 9⁻ or 7⁺ levels, are computed from γ energies.

[‡] The spin and parity of each bandhead are assumed ([1982Be46](#) and [1999Ha04](#)), with the 9⁻ band proposed to be analogous to a 9⁻ band in ¹⁵²Eu and the 7⁺ band to be analogous to one in ¹⁵⁶Tb.

[#] From [1999Ha04](#) only.

[@] Band(A): Signature=1 band, with the configuration (π h_{11/2})(ν i_{13/2}).

[&] Band(B): Signature=0 band, with the configuration (π h_{11/2})(ν i_{13/2}).

^a Band(C): Signature=1 band, with the configuration (π 3/2[411])(ν i_{13/2}).

^b Band(D): Signature=0 band, with the configuration (π 3/2[411])(ν i_{13/2}).

[†] Values are from [1982Be46](#), unless otherwise noted. γ 's reported only by [1999Ha04](#) are noted.

[‡] Values are from [1982Be46](#). The authors state that the uncertainties are “10% to 30% depending on the line strength and the complexity of the spectrum.” The evaluator have interpreted this as 10% for $I\gamma \geq 30$, 20% for $30 > I\gamma \geq 10$, and 30% for $I\gamma < 10$.

[#] Assigned E2 by evaluator based on $A_2/A_0 > 0.15$ ([1982Be46](#)), which is interpreted as $\Delta J=2$ transition.

[@] From [1999Ha04](#) only.

[&] From [1982Be46](#) only.

^a γ placed from the 0+x (9⁻) level by [1982Be46](#), but no other information is given regarding this γ or the level populated by IT.

^b From [1999Ha04](#); other: 732 from [1982Be46](#), but questionable there.

^c Value may include contribution from ^{155}Tb .

^d Multiply placed with undivided intensity.

^e Placement of transition in the level scheme is uncertain.

^x γ ray not placed in level scheme.
