

$^{154}\text{Gd}(\text{d},\text{p}) \quad 1986\text{Sc25,1967Tj01}$ 

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	N. Nica	NDS 160, 1 (2019)	21-Oct-2019

## Additional information 1.

**1986Sc25:** E(d)=14 MeV and 20 MeV. Enriched (95%  $^{154}\text{Gd}$ ) target of  $\text{Gd}_2\text{O}_3$ , having a thickness of  $50 \mu\text{g}/\text{cm}^2$ , and deposited on  $4.3 \mu\text{g}/\text{cm}^2$  thick carbon backings. Outgoing protons were analyzed in a Q3D spectrograph and were detected using a multiwire detector. The resolution (FWHM) was 5 keV. Measured energy spectra and cross sections at  $\theta=45^\circ$  only.

**1967Tj01:** E(d)=12.1 MeV. Targets prepared by deposition on carbon foils (thickness $\approx 40 \mu\text{g}/\text{cm}^2$ ) of isotope-separated Gd material in an isotope separator. Reaction products were analyzed in a broad-range magnetic spectrograph and detected in photographic plates. The resolution achieved was not better than  $\approx 13$  keV. Accuracy of the measured excitation energies was 3 keV below 1 MeV and 5 keV otherwise. Measured spectra at  $\theta=60^\circ$ ,  $90^\circ$  and  $125^\circ$ .

1057.1 6			0.0144 20	
1060.9 <sup>o</sup> 4	(5/2) <sup>-</sup>		0.0105 17	E(level): this energy is given as 1070.9 by 1986Sc25, and this level is interpreted by them as being a member of the K-2 γ-vibrational band built on the g.s. The evaluator has assumed that this number is a typographical error (and should be 1060.9), since the “1070.9 level” is not otherwise mentioned in their paper, whereas, the 1060.599 level populated in (n,γ) is referred to in several places as being this band member. J <sup>π</sup> : 1986Sc25 report 5/2 <sup>-</sup> ,7/2 <sup>-</sup> and tentatively assign this level as the 5/2 <sup>-</sup> member of the indicated band.
1079.65 20	1/2 <sup>-</sup> ,3/2 <sup>-</sup>		0.038 4

<sup>†</sup> Unless noted otherwise, the listed values are from (d,t) (1969Ja04).

<sup>‡</sup> Listed value is taken from the (n, $\gamma$ ) data, which were used by 1986Sc25 to obtain a more accurate split of the intensity in peaks that correspond to more than one level.

<sup>#</sup> For levels below 1580 keV, the values are those of 1986Sc25. Above this energy they are those of 1967Tj01. The values of 1986Sc25 represent averages of all of their (d,p) and (d,t) measurements.

<sup>@</sup> From adopted values. Cases where these differ from those deduced from these studies are pointed out. The values reported by 1986Sc25 take into account information from other sources as well as from their data.

<sup>&</sup> Label= $d\sigma/d\Omega(d,p)$  (mb/sr).

<sup>a</sup> Values at  $\theta=45^\circ$  and for  $E(d)=20$  MeV.

<sup>b</sup> From 1967Tj01, measured at  $\theta=60^\circ$  and  $E(d)=12.1$  MeV.

<sup>c</sup> Band(A):  $3/2[521]$  band, g.s. band.

<sup>d</sup> Band(B):  $3/2[651]$  band.

<sup>e</sup> Band(C):  $3/2[402]$  band.

<sup>f</sup> Band(D):  $3/2[532]$  band.

<sup>g</sup> Band(E):  $5/2[642]$  band.

<sup>h</sup> Band(F):  $1/2[400]$  band.

<sup>i</sup> Band(G):  $1/2[530]$  band.

<sup>j</sup> Band(H):  $5/2[523]$  band.

<sup>k</sup> Band(I):  $1/2[521]$  band.

<sup>l</sup> Band(J): “beta vibration” built on the g.s. ( $K^\pi=3/2^-$ ).

<sup>m</sup> Band(K):  $1/2[660]$  band.

<sup>n</sup> Band(L): “beta vibration” built on the  $3/2[651]$  band ?

<sup>o</sup> Band(M): K-2  $\gamma$  vibration built on the g.s.

<sup>p</sup> Band(N):  $11/2[505]$  bandhead.

<sup>q</sup> Band(O):  $7/2[404]$  bandhead.
