0 [†]	0 ⁺	26.1 s 7	AB	%α=10 2; %ε+%β ⁺ =90 2 T _{1/2} : Weighted average of 25.8 s 10 (1977Ha48) and 26.7 s 6 (1980AfZZ) from α counting and 23.6 s 13 (1983MI01) from counting α's and γ's following ε decay. Others: 24 s 1 (1970ToZS) and 23 s 1 (1982To14), both by the same authors as those of 1983MI01. %α: Weighted average of 21 6 (1979Ho10), 9 2 (1983MI01), and 10 +5-2 (1984GaZY). Δ<r ² >(158-156)=0.235 and Δ<r ² >(156-154)=0.274 (values are from differences of values reported in 1994Ma57, but based on isotope shift data from 1989Sp04). Uncertainties propagated from data in 1994Ma57 are ≈0.06, but the unstated correlation terms would reduce these uncertainties by a large factor. The same Δ<r ² > data are given in plot form in 1990Sp05 and 1991Ho27. Others: Δ<r ² >(158-156)≈0.23 fm ² (1987NeZW, obtained from graph by evaluator) and related λ values in the compilation by 1987Au06 and references therein. From an evaluation of data on nuclear rms charge radii, 2004An14 report <r ² > ^{1/2} =5.116 fm 13.
