

<sup>156</sup>Gd(<sup>3</sup>He,d), <sup>156</sup>Gd(α,t) 1972Bo47,1972Ti05

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	N. Nica	NDS 132, 1 (2016)	4-Dec-2015

Data are from two measurements of <sup>156</sup>Gd(<sup>3</sup>He,d) and two of <sup>156</sup>Gd(α,t) (1972Bo47 and 1972Ti05). For both 1972Bo47 and 1972Ti05, E(<sup>3</sup>He) ≈ 25 MeV (FWHM ≈ 12 keV) and E(α) ≈ 26 MeV (FWHM ≈ 16 keV) with d and t measured in magnetic spectrographs. Other: S(p)=5521.7 25 (1975Bu02) and measured cross sections (1981Ow02).

Experimental methods:

1972Bo47: E(<sup>3</sup>He)=25.5 MeV and E(α)=27.0 MeV on enriched target. d and t measured in magnetic spectrograph with FWHM ≤ 20 keV.

1972Ti05: E(<sup>3</sup>He)=24 MeV and E(α)=25 MeV on enriched (93.58%) target. d and t measured in magnetic spectrograph, with FWHM ≤ 16 keV.

1975Bu02: p separation energy measured.

1981Ow02: E(<sup>3</sup>He)=35 MeV and E(α)=35 MeV on enriched (94%) target. d and t measured in magnetic spectrograph with FWHM=20-28 keV. Cross sections reported.

<sup>†</sup> Average of values of 1972Bo47 and 1972Ti05 for both reactions.

<sup>‡</sup> Assignments are those of experimentors and are based on comparison of experimental and calculated (DWBA calculations including effects of pairing and Coriolis interaction) spectroscopic factors, systematics of the Nilsson states, and rotational band structure. The assignments of 1972Bo47 and 1972Ti05 agree below 850 keV; above that energy those of 1972Ti05 are given and those of 1972Bo47 which differ are in comments. Significant differences from the assignments in the Adopted Levels are noted.

<sup>#</sup> From 1972Bo47 only.

<sup>@</sup> From 1972Ti05 only.
