

(HI,xnγ) 1995Ri01

Type	Author	History Citation	Literature Cutoff Date
Full Evaluation	N. Nica	NDS 132, 1 (2016)	4-Dec-2015

Experimental methods:

1979HoZQ: abstract; ¹⁴⁴Sm(¹⁶O,p2nγ) at 107 MeV, no specific data.

1985Ko30: ¹⁴⁷Sm(¹⁴N,4nγ) at 80 – 120 MeV. Report 6 γ's.

1987AnZQ: ¹²⁶Te(³⁶Cl,4nγ) at 150 MeV. Measured E_γ, I_γ, and γ(θ) and report 40 levels.

1988RiZY, 1988RiZX, 1989RiZU, 1989RiZX: preliminary reports, see 1995Ri01.

1995Ri01: ¹¹⁰Pd(⁵¹V,4nγ) at 220 MeV. Measured E_γ, I_γ, and γ(θ) and report 53 levels. The authors of this article report a private communication from S. Andre and C. Foin in which the latter report γ polarization measurements.

[†] Energies are relative to the 11/2⁻ level and are from 1995Ri01. Uncertainties are expected to increase from 0.1 at the lower levels to 1.2 keV at the upper levels.

[‡] From 1995Ri01 and based on analysis of data for whole scheme including γ multipolarities from DCO's and the band structure.

[#] Band(A): Signature=-1/2 portion of 11/2⁻ band.

[@] Band(B): Signature=+1/2 portion of 11/2⁻ band.

[&] Band(C): Signature=-1/2 portion of negative-parity band.

^a Band(D): Signature=+1/2 portion of negative-parity band.

^b Band(E): Signature=-1/2 portion of another negative-parity band.

^c Band(F): Signature=-1/2 portion of 1st positive-parity band.

^d Band(G): Signature=+1/2 portion of 1st positive-parity band.

^e Band(H): Signature=-1/2 portion of 2nd positive-parity band.

^f Band(I): Signature=+1/2 portion of 2nd positive-parity band.

[†] From general comment (1995Ri01), uncertainties are 0.1 keV for most γ 's, but as large as 0.5 keV for weak and contaminated γ 's. The evaluator has not assigned uncertainties.

[‡] Predominately from the 393-gated spectrum.

[#] From 1995Ri01 and based on analysis of data for the whole scheme including J^π assignments; note that multipolarity assignments are made for all γ 's.

(HI,xn γ) 1995Ri01 (continued)

 $\gamma(^{157}\text{Tm})$ (continued)

[@] DCO is the ratio $I_{\gamma}(87^{\circ},24^{\circ})/I_{\gamma}(24^{\circ},87^{\circ})$ where $I_{\gamma}(87^{\circ},24^{\circ})$ is intensity measured at 24° in coincidence with 87° detector.

[&] Multipolarity verified by linear polarization by S. Andre and C. Foin as cited in [1995Ri01](#).

^a Placement of transition in the level scheme is uncertain.

(HI,xn γ) 1995Ri01**Level Scheme**Intensities: Relative I_γ

Intensities: Relative I_γ

Legend

- $I_\gamma < 2\% \times I_\gamma^{max}$
- $I_\gamma < 10\% \times I_\gamma^{max}$
- $I_\gamma > 10\% \times I_\gamma^{max}$

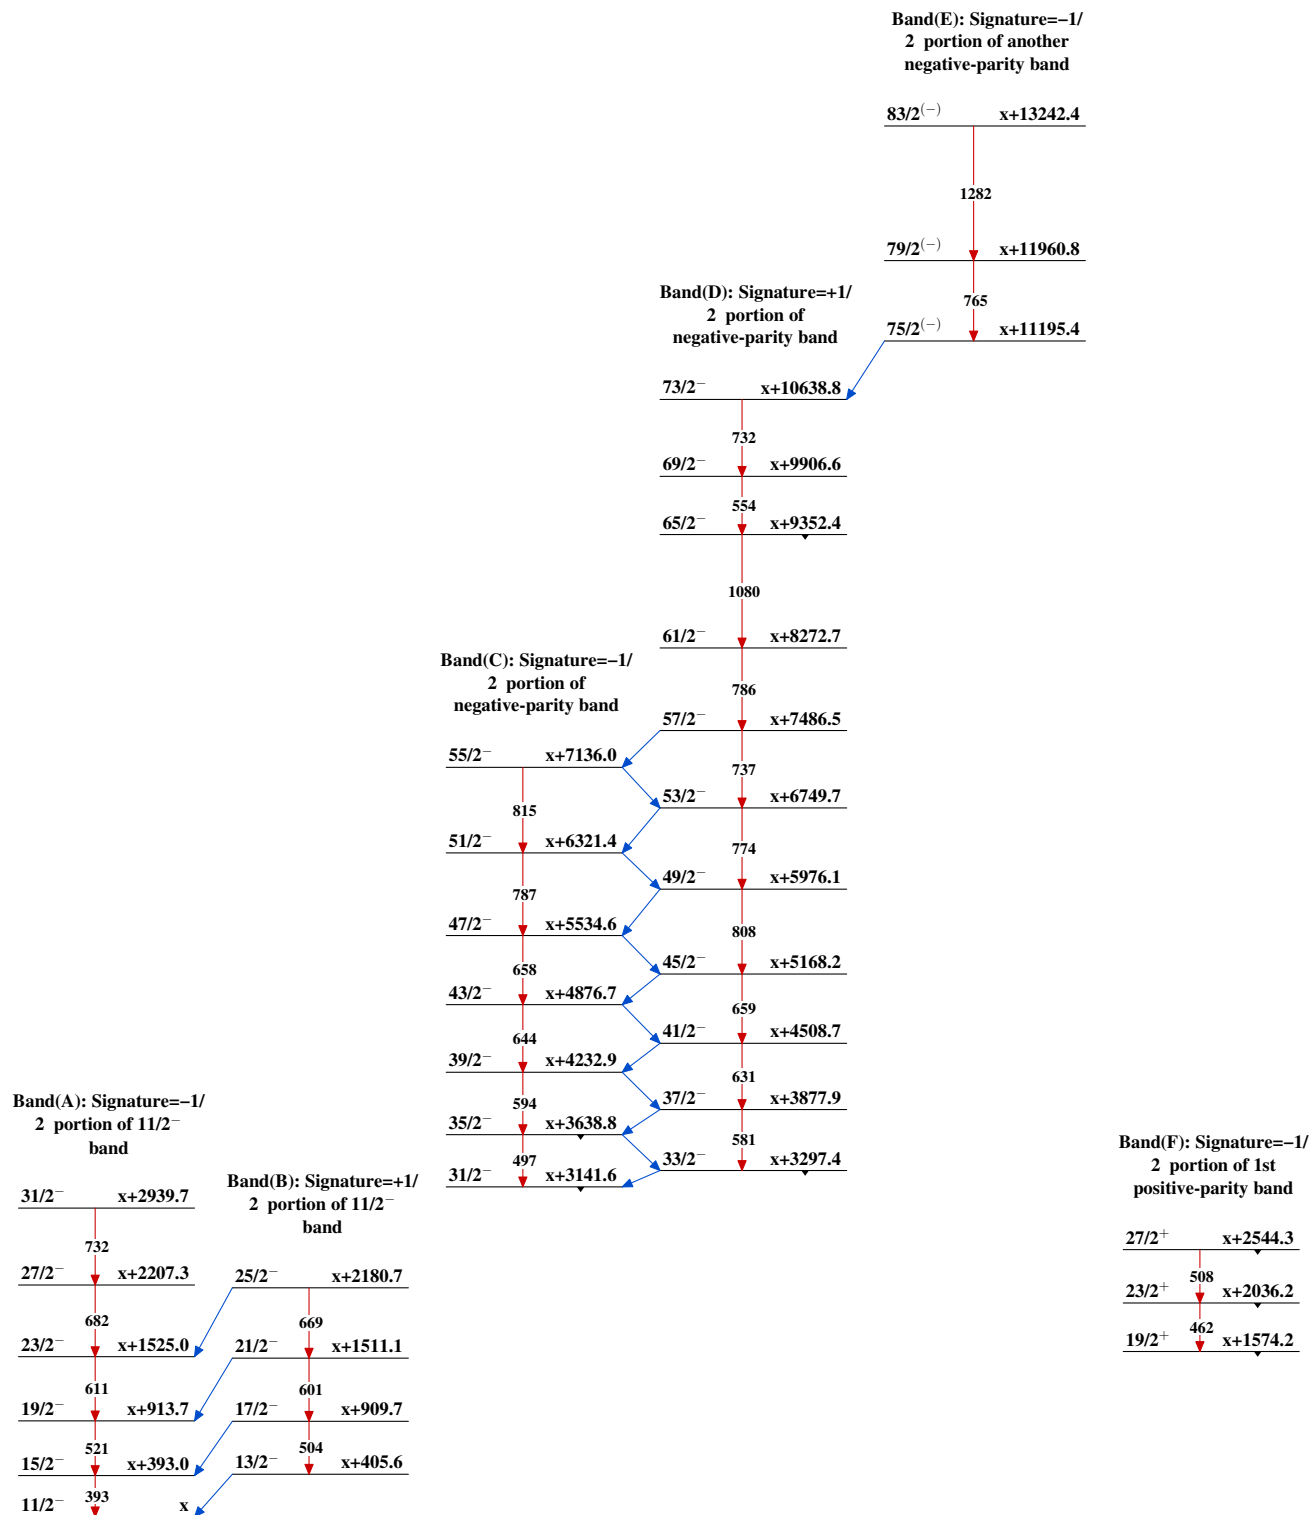

$^{157}_{69}\text{Tm}_{88}$

(HI,xn γ) 1995Ri01**Level Scheme (continued)**Intensities: Relative I_γ

Legend

- $I_\gamma < 2\% \times I_\gamma^{\max}$
- $I_\gamma < 10\% \times I_\gamma^{\max}$
- $I_\gamma > 10\% \times I_\gamma^{\max}$
- - - - - γ Decay (Uncertain)

 $^{157}_{69}\text{Tm}_{88}$
