

Adopted Levels, Gammas

Type	Author	Citation	Literature Cutoff Date
Full Evaluation	B. Singh and N. Nica	ENSDF	31-Dec-2017

S(n)=12234 (syst) 500; S(p)=1328 (syst) 335; Q(α)=6613 3 2017Wa10
 Q(ε)=7534 (syst) 358; S(2p)=394 (syst) 335; Q(εp)=7982 (syst) 358 2017Wa10

¹⁵⁸W Levels

With S(2p)(¹⁵⁸W)=390 340 (syst,2017Wa10), all the observed excited states are expected to be unbound towards two-proton emission, but no evidence has been found for this decay mode for the decay of the (8⁺) isomer.

Cross Reference (XREF) Flags

- A ¹⁵⁹Re p decay (20 μs)
- B ¹⁶²Os α decay (2.1 ms)
- C ¹⁰²Pd(⁵⁸Ni,2nγ)

E(level) [†]	J ^{π‡}	T _{1/2}	XREF	Comments
0.0	0 ⁺	1.25 ms 2I	ABC	%α=100 T _{1/2} : weighted average of 0.9 ms 3 (1989Ho12), 0.9 ms +4-3 (1996Pa01), and 1.5 ms 2 (2000Ma95), all from ¹⁵⁸ W α decay. %α: from gross beta theory (1973Ta30), T _{1/2} (ε+β+) ≈ 2 seconds, so %ε+%β+ ≈ 0.05. Similarly, 1997Mo25 give 0.33 s which would correspond to %ε+%β+ ≈ 0.3.
913 ^{#&}	(2 ⁺)		C	
1679 ^{#&}	(4 ⁺)		C	
1888 ^a 8	(8 ⁺)	0.143 ms 19	C	%α≈100; %2p≤0.17 (2017Jo09); %IT=? %2p branch at 90% confidence level, corresponding to partial T _{1/2} ≥85 ms for 2p-decay mode (2017Jo09). Spin-trap isomer, with configuration=νf _{7/2} ⊗vh _{9/2} (2017Jo09). E(level): from 2000Ma95 based on α decay of this level with E _α =8286 7 and the assumption that this α branch populates the daughter ground state. This level was earlier proposed by 1989Ho12 with only slightly different energies. J ^π : proposed by 1989Ho12 and 2000Ma95, based on analogy with a supposedly similar situation in ¹⁵⁶ Hf. The hindrance factor for the implied resulting ΔL=8 α transition is consistent with those in several near-lying nuclides (1996Pa01). T _{1/2} : weighted average of 0.16 ms 5 (1996Pa01) and 0.14 ms 2 (2000Ma95); other: 0.01 ms < T _{1/2} < 1 ms (1989Ho12).
2048 ^{#&}	(6 ⁺)		C	
2846 ^{@a}	(10 ⁺)		C	
3690 ^{@a}	(12 ⁺)		C	
4165 ^{@a}	(14 ⁺)		C	
4368 ^{@a}	(16 ⁺)		C	

[†] From E_γ values, except that the isomer energy is based on observed E_α from its decay.

[‡] From 2017Jo09, based on yrast sequences built on g.s. and the (8⁺) isomer, and shell-model configurations.

Proposed configuration=νf_{7/2}² (2017Jo09).

@ Proposed configuration=πh_{11/2}²⊗νf_{7/2}², based on shell-model calculations (2017Jo09).

& Seq.(A): γ cascade based on g.s.

^a Seq.(B): γ cascade based on (8⁺) isomer.

Adopted Levels, Gammas (continued) $\gamma({}^{158}\text{W})$

$E_i(\text{level})$	J_i^π	E_γ	E_f	J_f^π
913	(2 ⁺)	913	0.0	0 ⁺
1679	(4 ⁺)	766	913	(2 ⁺)
2048	(6 ⁺)	369	1679	(4 ⁺)
2846	(10 ⁺)	958	1888	(8 ⁺)
3690	(12 ⁺)	844	2846	(10 ⁺)
4165	(14 ⁺)	475	3690	(12 ⁺)
4368	(16 ⁺)	203	4165	(14 ⁺)
